Database

Structural Challenges

- DATABASE
 - Data Storage Backbone
 - Time-series focused database for real-time data.
- Open-source:
 - user-friendly interface
 - Community-driven
- Built-in data processing features.
- Highly scalable: from Raspi to Data Center
- Flexible data storage:
 - Different retention policies
 - Data downsampling

Schema

Line Protocol in InfluxDB

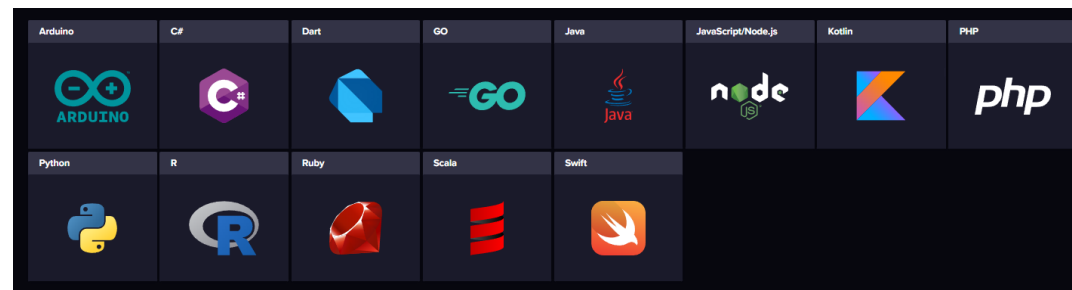

```
<measurement>,<tag> <field> <timestamp>
```

```
sensor_battery,sens_model=XT004,batt_type=LiPo voltage=12.5,current=-0.3,temp=19.4 1658754288
```

1. **Measurement**: This is **equivalent** to a **table** in a relational database.
2. **Tags**: **metadata** consisting of **key-value pairs** that contextualize your data. **Indexed**. tag values are **strings**.
3. **Fields**: Fields are **key-value pairs** for the **actual data points** you're collecting. Fields can be integers, floats, strings, or Booleans.
4. **Timestamp**

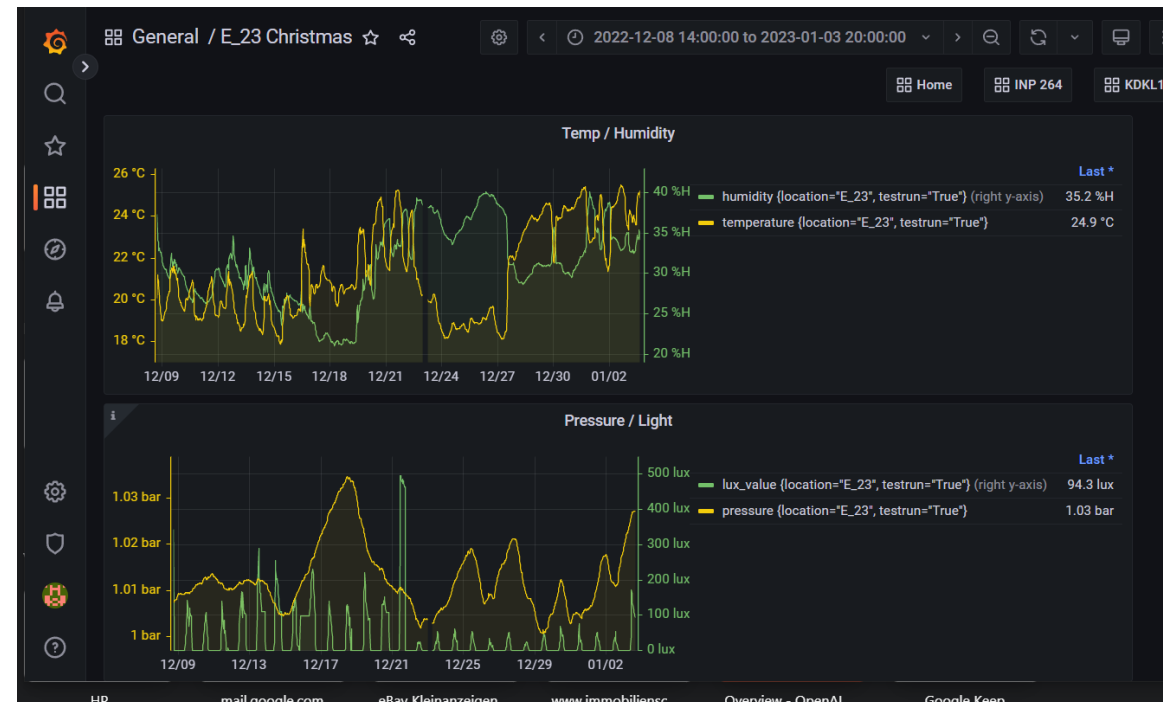

- It is as easy as sending a simple string!

- Client Libraries:

Grafana Overview

- Open-source visualization platform for data analysis.
- Supports various data sources and integrations.
- Offers customizable visualization options.
- Provides real-time streaming of data and alerts.
- Highly extensible with plugins and a large community.

Side Quest C3PO: Protocol Droid

May the 4th...

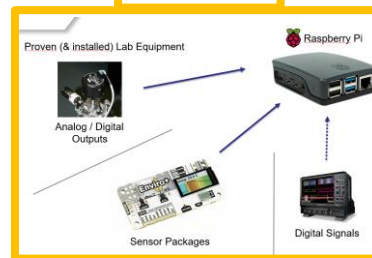

C-3PO is a humanoid protocol droid in the Star Wars universe who is fluent in over six million forms of communication. He is skilled in transcribing audio into text and providing diplomatic protocol advice.

Open Laboratory Environment (OLE) / SensorNet

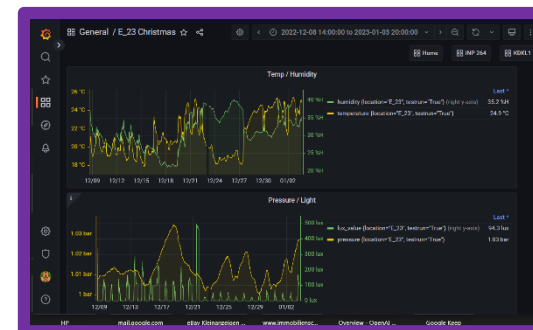

LESP

Towards **standardized**, **open-source** measurement procedures to enable **Machine Learning** in a **big data** approach
